

## SecureLogin SSO 6.1

**SecureLogin SSO 6.1 training is aimed at future SecureLogin SSO administrators and/or SecureLogin SSO system integrators. It is definitely an intensive hands-on training which will offer to all attendees an in-depth understanding of the product and a real hands-on experience of scripting in several environments (Win32, Web, and Terminal Emulators). It will also provide detailed information and tips on how to deploy SecureLogin SSO on Active Directory, ADAM, and other compliant LDAP directories like eDirectory.**

Course Highlights	Duration - 3 days
Prerequisites	Standard Technologies (07704) An understanding of Active Directory and Windows Networking is essential
ActivIdentity Certification	ActivIdentity Certification on Single Sign On Solution can be taken after attending all courses below: - Standard Technology (07704) - SecureLogin SSO 6.1 (07732)
Course Structure	Instructor lead, this intensive hands-on course is delivered in a comprehensive and interactive environment.

### Administrator Module (Day 1 and 2)

Understanding SecureLogin SSO 6.1 Architecture  
 Controlling **Win32** Applications  
   Tools: Window Finder and SLScriptBuilder  
   Handling Failed Login  
   Handling Change Passwords  
   Parent / Child Architecture  
   Distributing Applications to all users  
   Randomizing passwords  
   Password policies  
   WM\_Events  
   Sharing Credentials  
 Creating **Startup** Definitions  
 Controlling **Web Pages**  
   Web Wizard  
   Advanced Web  
 Controlling **Terminal Emulators**  
   Understanding Terminal Launcher  
   Creating Session files  
   Building Application Definition  
 Creating shortcuts for end-users  
 Generating One-Time Passwords from a Smart Card

### Integrator Module (Day 3)

Understanding SecureLogin SSO Encryption Model  
 Supported Environments  
 Before Installation Check-List  
 Installing SecureLogin SSO on ADAM & AD  
 Installing with the Installer package  
 Installed SecureLogin SSO components  
 ActivClient deployment  
 Configuring SecureLogin SSO and smart cards  
 Setting up corporate preferences  
 Managing passphrases  
 Creating a generic emulator  
 Getting support
